Brief usage of JavaScript

Create your first Web3D scene

Introduction of basic module in Three.js

Most materials are referenced from CS451, David Kauchak

Brief usage of JavaScript

JavaScript:

- JavaScript is the programming language of the Web.
- All modern HTML pages use JavaScript.
- After JavaScript is inserted into the HTML page, all modern browsers are available.

Three parts of Web :

- **HTML** defines the content of the web page
- **CSS** describes the layout of the web page
- **JavaScript** describes page behavior

Brief usage of JavaScript

JavaScript Usage :

The script in the HTML must be between the `<script>` and `</script>` tags.

Scripts can be placed in the `<body>` and `<head>` sections of the HTML page.

To insert JavaScript into an HTML page, use the `<script>` tag.

`<script>` and `</script>` tell JavaScript where to start and end.

The line of code between `<script>` and `</script>` contains JavaScript.

You can place an unlimited number of scripts in your HTML document.

The script can be in the `<body>` or `<head>` section of the HTML, or both.

The usual practice is to put the function in the `<head>` section or at the bottom of the page. This allows the m to be placed in the same location without disturbing the content of the page.

Brief usage of JavaScript

JavaScript functions in <head>

源代码:

点击运行

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
<title>HelloWorld</title>
<script>
function myFunction(){
    document.getElementById("demo").innerHTML="我的第一个 JavaScript 函数";
}
</script>
</head>
<body>

<h1>我的 Web 页面</h1>
<p id="demo">一个段落。</p>
<button type="button" onclick="myFunction()">点击这里</button>

</body>
</html>
```

运行结果

我的 Web 页面

一个段落。

点击这里

Brief usage of JavaScript

JavaScript functions in <body>

源代码:

点击运行

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
<title>HelloWorld</title>
</head>
<body>

<h1>我的第一个 Web 页面</h1>
<p id="demo">一个段落。</p>
<button type="button" onclick="myFunction()">点击这里</button>
<script>
function myFunction(){
    document.getElementById("demo").innerHTML="我的第一个 JavaScript 函数";
}
</script>

</body>
</html>
```

运行结果

我的第一个 Web 页面

一个段落。

点击这里

Brief usage of JavaScript

External JavaScript

源代码:

🚀 点击运行

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
<title>HelloWorld</title>
</head>
<body>

<h1>我的 Web 页面</h1>
<p id="demo">一个段落。</p>
<button type="button" onclick="myFunction()">点击这里</button>
<p><b>注释: </b>myFunction 保存在名为 "myScript.js" 的外部文件中。</p>
<script src="myScript.js"></script>

</body>
</html>
```

运行结果

我的 Web 页面

一个段落。

点击这里

注释: myFunction 保存在名为 "myScript.js" 的外部文件中。

Create your first Web3D scene

HTML5 → WebGL → Three.JS

Basically Three.js can run on any popular browser, except for most versions of IE. So if you want to use the old version of IE, you have two options: you can use Google Chrome Frame to support WebGL, which can be downloaded from

<https://developers.google.com/chrome/chrome-frame/>.

In addition to Google Chrome Frame, you can also use the iwebgl plugin, which is available at <http://iwebgl.com/>. Install this plugin on IE to support WebGL.

Create your first Web3D scene

Three.JS download:

<https://github.com/mrdoob/three.js/tree/master/build>

Three.JS frame:

Introduction of basic module in Three.js

Camera:

(a)

(b)

(a)透视投影, (b)正交投影

Introduction of basic module in Three.js

Orthographic Camera:

```
THREE.OrthographicCamera(left, right, top, bottom, near, far)
```

```
var camera = new THREE.OrthographicCamera(-2, 2, 1.5, -1.5, 1, 10);  
camera.position.set(0, 0, 5);  
scene.add(camera);
```

Introduction of basic module in Three.js

Tongji Microsoft Student Club

Perspective Camera

```
THREE.PerspectiveCamera(fov, aspect, near, far)
```

```
var camera = new THREE.PerspectiveCamera(45, 400 / 300, 1, 10);  
camera.position.set(0, 0, 5);  
scene.add(camera);
```

透视图

侧视图

Introduction of basic module in Three.js

Geometry:

CubeGeometry

```
THREE.CubeGeometry(width, height, depth, widthSegments, heightSegments, depthSegments)
```

```
new THREE.CubeGeometry(1, 2, 3, 2, 2, 3)
```

Introduction of basic module in Three.js

Geometry:

PlaneGeometry

```
THREE.PlaneGeometry(width, height, widthSegments, heightSegments)
```

SphereGeometry

```
THREE.SphereGeometry(radius, segmentsWidth, segmentsHeight, phiStart, phiLength, thetaStart, thetaLength)
```

Introduction of basic module in Three.js

BasicMaterial

```
THREE.MeshBasicMaterial(opt)
```

```
new THREE.MeshBasicMaterial({  
  color: 0xffff00,  
  opacity: 0.75  
});
```

Introduction of basic module in Three.js

MeshLambertMaterial

```
Idiffuse = Kd * Id * cos(theta)
```

```
new THREE.MeshLambertMaterial({  
  color: 0xffff00,  
  emissive: 0xff0000  
})
```

Introduction of basic module in Three.js

MeshPhongMaterial

```

$$I_{\text{specular}} = K_s * I_s * (\cos(\alpha))^n$$

```

```
material = new THREE.MeshPhongMaterial({  
  color: 0xff0000,  
  specular: 0xffff00,  
  shininess: 100  
});
```
